

For Official Use Only

Input Survey in Uttarakhand

Year: 2006-07

Govt. of Uttarakhand

(Agricultural Census Division)
Board of Revenue, Uttarakhand,
Dehradun

Preface

The Input Survey being of follow up survey of Agricultural Census is being conducted in the state quinquennially since 1976-77 with the financial support of the Govt. of India. The objective of the survey is to collect information on application of various inputs such as chemical fertilizers, farm yard manures, Pesticide, Livestock, Agricultural implements & machinery, Agricultural credit etc.

The input survey 2006-07 being the seventh in the series was conducted during July 2006 to March 2007 covering 1133 sample villages in the state under the guidance of agriculture Census Division, Board of Revenue, Uttarakhand Dehradun. The data was collected from operational holdings of sample villages with the concerted efforts of the statistical and Revenue official at the state/district/tehsil level. I thank them for their contribution. I would also thank NIC/ DOEACC Kolkata for computerization & generation of final tables of the input survey.

The Agricultural Census Division is now working under the administrative control of Chairman, Board of Revenue,. The report on Input Survey, 2006-07 has been prepared in this Division.

I would like to thank Dr. Ajay Kumar Sharma, Joint Director, Agricultural census, Sri B. S. Negi Assistant Director, Agricultural census Division for analyzing the data, drafting & editing of the report to bring it in present form.

I hope this report will be useful to planners, policy makers & researches in future planning of policy making.

*(Shri Shubhash Kumar)
Chairman
Board of Revenue, Uttarakhand*

HIGHLIGHTS

The highlights are based on the input Survey 2006-07 covering 1133 sample villages of the state being surveyed during July 2006 to March 2007. The data from the operational holders of the above villages on different indicates are collected & estimated.

1. *According to Input Survey 2006-07 the total number of operational holdings in the state were 9.18 lakh against the operated of 8.47 ha. (excluding institutional holding)*
2. *The total number of parcels is estimated shares of size classes- Marginal, Small, Semi-Medium, Medium & Large are 3.11, 7.02, 8.44, 9.21 & 20.23 respectively.*
3. *The percentage of cropped once was 28.06 while are cropped twice was 70.33. However the percentage of area cropped more than twice was 1.62. Similarly against Un- irrigated area, the area cropped once constituted 37.87 where as the remaining 62.13 belonged to area cropped more than once.*
4. *About 87.35 of the irrigated area to the total gross cropped irrigated area under all size groups was treated with chemical fertilizer, where as the corresponding figure for un-irrigated area was 3.59. As regards application of Farm Yard Manure (FYM), it is found that about 31.04 of gross cropped irrigated area was received FYM against to corresponding figure of 91.22 in un irrigated area. About pesticides, 50.67 of the irrigated area was treated with pesticides as against 0.94 in un irrigated area.*
5. *The use of N (Nitrogen) for all crops under irrigated area was estimated as 19.08 kg/ha. which is higher compared to un irrigated area where the rate of use was 1.46 kg/ha. the rate of application of P for all crops was 5.12 kg/ha in irrigated area against 1.36 kg/ha in un irrigated area. The application of K in irrigated area was 37.42 kg/a against 0.06 kg/ha in un irrigated area for all crops.*
6. *The number of cattle, buffaloes, sheep, goats, horse & ponies, mules, donkeys, pigs & poultry held by the operational holders during 2006-07 for all size groups was estimated as 7.23, 5.85, 2.48, 13.38, 0.15, 0.52, 0.01, 0.06 and 6.76 respectively.*
7. *The percentage number of operational holdings who took institutional credit for agricultural purposes to total operational holdings was 0.94 for all size groups, where as the corresponding figure for marginal, small, semi-medium, medium holdings and large were 6.74, 14.62, 23.22, 36.26 and 41.71.*

CHAPTER-ONE

1.1 INTRODUCTION

The collection and maintenance of data on AGRICULTURAL HOLDINGS assumes greater importance for making various policies relating to land at the Govt. level. Accordingly the Agricultural Census Division has been conducting periodic Agricultural Censuses since 1970-71, being sponsored by the Deptt. Of Agricultural & Cooperation, Govt. of India. In addition to Agricultural Census, Input Survey is also being conducted as a follow up survey of Census since 1976-77 quinquennially. The input Survey 2006-07 was the seventh in the series & was conducted during July 2006 to March 2007 in the state.

1.2 OBJECTIVE OF THE SURVEY

Objective -The primary objective of the Survey is to provide information on levels of consumption of various inputs like chemical fertilizers, farm yard manure/compost, pesticides, agricultural implements and machinery, livestock and agricultural credit etc. by major size groups of holdings. Information is also collected on the extent of scatteredness of holdings. In this survey, the data were collected for the five major size groups of operational holdings, viz., marginal (below 1 ha.), small (1 - 2 ha.), semi-medium (2-4 ha.), medium (4-10 ha.) and large (10 ha. and above). This information is, inter-alia, required for planning the production, imports, distribution and stocks of important inputs such as fertilizers, pesticides, credit etc.

1.3 COVERAGE

In Input Survey 2006-07, the entire state was covered. All kinds of agricultural holdings except institutional holdings, i.e. individual and joint holdings only were covered. In addition, 'purely current fallow holdings', resident cultivators of the urban areas and deemed resident cultivators of the selected villages were kept out of the purview of Input Survey 2006-07.

1.4 UNIT OF COLLECTION DATA

The basic unit for which data for various parameters of the Input Survey were collected was the 'operational holding' as distinct from the 'ownership holding'.

1.5 REFERENCE PERIOD

The reference period for this Survey was the agricultural year 2006-07 (July, 2006 to June, 2007). The data was collected in two visits separately for kharif and rabi seasons of 2006-07 immediately after the agricultural operations for kharif and rabi were over in order to minimize informant bias on account of memory lapse. The reference data for agricultural implements and machinery and livestock was 15th October, 2006.

1.6 SAMPLING DESIGN

As stated above, the Input Survey relates to the collection of data on application of various inputs such as fertilizers, pesticides etc. in the cultivation of different food and non-food crops as also regarding multiple cropping, inventory of agricultural machinery and implements, livestock, agricultural credit etc.

The sampling design for the Input Survey 2006-07 was a two-stage random sample, one with village as the first stage and the operational holding as the second stage. In each block/tehsil, the sampling was, thus, to be performed at two stages- a

sample of villages and a sub-sample of operational holdings in the sample villages. The ultimate sampling unit was an operational holding.

1.7 SAMPLE SIZE AND METHODOLOGY

The number of villages covered for the Input Survey 2006-07 was 7 percent of the total number of villages in the States. The 7 percent villages were selected randomly with Tehsil as the stratum from out of the 20 percent villages already selected and canvassed for the Agricultural Census 2006-07. In a selected village, all the operational holdings were grouped into following five groups:-

i	Below 1 ha.
ii	1 ha. and above but below 2 ha.
iii	2 ha. and above but below 4 ha.
iv	4 ha. and above but below 10 ha. and
v	10 ha. and above.

Four operational holdings were selected from each of the above five size groups of holdings. The selection was made at random separately from each of these size groups. If in a particular size group, the total number of operational holdings were less than 4, then all the holdings of that size group was covered. The data for Input Survey was collected through field enquiries from these selected operational holders.

The estimates for Input Characteristics were prepared at district level. In case the district level estimates were pooled to arrive at State level estimates.

For rabi survey, enumerators would cover the same operational holdings which were covered in kharif season. In case the size of selected holdings changed during the reference period, the area obtained in kharif season was taken as standard. For example, if a particular holding X in the size group 1 to 1.99 ha. (small holding) was divided into smaller holdings in such a way that the adjoining sub-divided holdings belonged to different size classes (marginal holding) then the enumerator would select another holding randomly from the same size group of 1 to 1.99 ha. in place of holding X. After that, the required information for rabi season as well as kharif would be collected for that area of kharif.

1.8 UNIT OF ENUMERATION

The data were collected in respect of each operational holding, which has been defined as “all land which is used wholly or partly for agricultural production and is operated as one technical unit by one person alone or with others, without regard to the title, legal form, size or location”. The technical unit has been defined as “that unit which is under the same management and has the same means of production such as labour force, machinery and animals”. Thus, the actual cultivator and not the owner is the unit for collection of data.

1.9 SAMPLE VILLAGES

The number of villages covered for the Input Survey was roughly 7 percent of the total number of villages in the State. These villages were randomly selected with

the tehsil, block as the stratum from out of the 20 percent villages already selected for Agricultural Census 2006-07.

In case, some uninhabited villages come in the sample for Input Survey, such villages have to be substituted. At the time of estimation, however, the uninhabited villages should be included in the total number of villages for arriving at the multiplication factors.

1.10 ITEM COVERAGE

Under the Input Survey, information was collected for five major size groups of operational holdings on the following items:-

- i) Number of parcels;
- ii) Multiple cropping, separately for irrigated and un-irrigated.
- iii) Use of chemical fertilizers, organic manures and pesticides separately for irrigated and un-irrigated areas under major crops (area covered and quantity used)
- iv) Livestock (Numbers)
- v) Agricultural machinery and implements
- vi) Agricultural credit and
- vii) Seeds.

1.11 COMPUTERIZATION

After completion of survey, the filled in schedules were scrutinized at the Board Of Revenue, Uttarakhand level to correct the errors and sent to the data entry house for computerization under the technical guidance of DOEACC (formerly RCC), Kolkata as appointed by the Government of India and National Information Center (NIC). New Delhi. The computerized data were subsequently validated and sent to the RCC Kolkata for estimation and generation of tables/results for the state/district according to tabulation plan of the Government of India.

1.12 CONTENTS OF THE REPORT

This is the seventh report on Input Survey 2006-07. Chapter-2 brings out the concepts and definition followed in the survey. Chapter-3 indicates limitations of data collected under the survey, were as Chapter-4 reflects summery of findings on use of chemical. Fertilizer, farm yard manures, pesticides, livestock, Agricultural implements & machinery, Agricultural credit including coverage of multiple cropping. The district level statuses are also presented in the chapter-4. The detail tables are presented in annexure, which gives estimates separately for different size groups of operational holdings.

CHAPTER-TWO

CONCEPTS AND DEFINITIONS

2.1 OPERATIONAL HOLDING

All land which is used wholly or partly for agricultural production and is operated as one technical unit by one person alone or with others without regard to the title, legal form, size or location.

2.2 TECHNICAL UNIT

A technical unit has been defined as that unit which is under the same management and has the same means of production such as labour force, machinery and animals.

2.3 AGRICULTURAL PRODUCTION

Agricultural production includes growing of field crops, fruits, seeds, tree nurseries (except those of forest trees), vegetables, production tea, rubber, oilseeds, fodder grass etc.

2.4 OPERATED AREA

Operated area would include both cultivated and uncultivated area, provided part of it is put to agricultural production during the reference period. It is for instance, if operational holding consists of four survey numbers out of which one survey number is put to non-agricultural uses, the total area of the operational holding will be equal to the total geographical area of all the four survey numbers.

It would also cover the land occupied by the farm buildings, including the house of the holder, provided such buildings are located within the operated area. If the farm buildings are located outside the cultivated area are covered under abadi area, such buildings would not be included.

Operated area would exclude government forest land, government waste land, village common grazing land, abadi area etc. If government wasteland is allotted to an individual then it will be included in the holding.

If the entire area of the holding (the area of all the survey numbers of an operational holding) is put to non-agricultural use and/ or it is under old fallow, it will not be considered as operated area. If however, the entire area of operational holding is under current fallow during the reference year but was cultivated in the preceding year, this would still be considered as operational holding. If the entire cultivated area is under current fallow land and other fallow land are also there, this will be treated as operational holding.

In some cases, land is divided amongst all the members of the family. Where it is divided between the husband, wife & minor children & the cultivation is being done by the husband as the head of the family, the land may be treated as one operational holding.

There might be cases where in the records, a holding is shown jointly in the name of more than one co-share, while in fact the land may have been privately divided and the co-sharers are independently cultivating. In such

cases where there is no dispute, they should be treated as many operational holdings as the number of independent cultivators. This is necessary because in Agricultural Census the data is to be collected on the basis of de facto position rather than de jure position.

In some cases, in the Zamabandi register against a Khata, name of three or four persons are shown. While from the records it would appear that there is only one holding, in practice, all the three or four brothers are actually cultivating the land independently or each other although there is no legal partition of land. From the Census point of view, this would constitute three or four operational holdings.

For cultivated area in the state Forest, no detailed land records are prepared. In the absence of revenue records and revenue agency such areas are excluded for Census purpose.

The operated area may comprise of:

- i) Land owned and self operated
- ii) Land leased in
- iii) Land otherwise operated

2.5

OPERATIONAL HOLDER

An operational holder is the person who has the responsibility for the operation of the agricultural holdings and who exercise the technical initiative and is responsible for its operation. He may have full economic responsibility or may share it with others. The operational holder may be individual/joint/institutional.

- 1) **Individual:** If the holding is being operated either by one person alone or by group of persons who are the members for the same household it will be considered as an individual holding.
- 2) **Joint:** If two or more persons belonging to different household, share jointly as partners in the economic and technical responsibility for the operation of an agricultural holdings, such holding would be considered as joint.
- 3) **Institutional:** Holdings such as government farms, sugarcane factories farms, cooperative farms, lands managed by trust would be treated as institutional.

2.6

PARCEL

A parcel is all land entirely surrounded by land of other holdings or by land not forming part of any holding. It may consist of one or more cadastral units, plots or fields.

2.7

RESIDENTIAL AND NON-RESIDENTIAL OPERATIONAL HOLDING

All the cultivators residing in a particular village and cultivating some land within the same block are resident cultivators of that village irrespective of the fact whether they are cultivating land within that village or not. A resident cultivator may, therefore, have: either (i) entire area of the holding located in the village of his residence, or (ii) partly within the village of residence and partly outside, or (iii) entirely outside the village of residence.

An operational holder operating some area which lies entirely outside the block in which his village of residence fall will not be treated as a resident

cultivator of the village of his residence for Agriculture Census purpose. He will be treated, as a resident cultivator of the village outside the block where the area operated by him is located.

If an area in a particular village is operated by a cultivator who resides outside that village but within the same block, he is a non-resident operational holder for that village. However, if this operational holder is resident of a village lying outside the block in which the area is located, he will be treated as a resident operational holder (deemed resident) of the village where the area is located.

2.8 COMPLETE/PART-HOLDING

A holding is said to be complete holding if the entire operated area of that holding is located in one village. If the operated area is spread over more than one village, it would be considered as part-holding.

2.9 WHOLLY IRRIGATED, PARTLY IRRIGATED AND WHOLLY UN-IRRIGATED HOLDINGS

If the entire net area sown in an operational holding is equal to net area irrigated, such holdings are considered as wholly irrigated holding. In case part of the net area sown area is irrigated, it will be partly irrigated and if the entire sown area has not received any irrigation during the year of reference; such holding would be wholly un-irrigated.

2.10 LAND UTILIZATION

Operated area would be classified into six broad categories:

Net area sown

Current fallow

Fallow land other than current fallow

Other uncultivated land excluding fallow land

Culturable waste and

Land not available for cultivation

- (i) **Net area sown**:- Total area sown with crops and orchards counting area sown more than once in the same year only once.
- (ii) **Current fallow**:- Cropped area, which are kept fallow during the current year but was cultivated in the previous year. For example with any seeding area is not cropped in the same year, it may be treated as current fallow.
- (iii) **Fallow land other than current fallow**:- All lands, which are taken up for cultivation but are temporarily out of cultivation for a period of not less than one year and not more than five years. The reasons for keeping such lands fallow may be one or more of the following:
 - a) Poverty of the cultivator
 - b) Inadequate supply of water
 - c) Malaria climate
 - d) Silting of canals and rivers and
 - e) Unremunerative nature of farming

- (iv) **Other uncultivated land excluding fallow:** This will include:
- a) **Permanent pastures and other grazing lands:** All grazing lands, whether they are permanent pastures and meadows or not. Village common grazing lands would, however, be excluded.
 - b) **Land under Miscellaneous Tree crops:** Cultivated land, which is not included in the net area sown but is put to some agricultural use. Land under casuarinas trees, thatching grasses, bamboo bushes and other groves for fuel which are not included under, 'Orchards' would be covered under this category.
- (v) **Culturable Waste:** All lands available for cultivation whether not taken up for cultivation or taken up for cultivation one but not cultivated during the current year and the last five years or more in succession for one reason or other. Such lands may be either wholly or partly covered with shrubs and jungles, which are not put to any use. Land once cultivated for five years in succession would also be included in this category.
- (vi) **Area not available for cultivation:** This would include Forest area under non-agricultural use, barren and uncultivable land.
- a) **Forest:** All lands classed as 'Forests' under any legal enactment dealing with forests or administered as forests whether State owned or private and whether wooded or maintained as potential forest land. The area of crops raised in the forest and grazing land or areas open for grazing with the forest would be included under the forest area. Only private forest would be covered for the purpose of Agricultural Census.
 - b) **Area under Non-Agriculture Use:** All lands occupied by buildings or ponds or lands put to use other than agriculture will be included in this category. Only such lands within the cultivated holding should be covered in the Census.
 - c) **Barren and Uncultivable Land:** All barren and uncultivable land within the cultivated holding.

CHAPTER-THREE

LIMITATIONS OF DATA

- 3.1** The Institutional holdings were not covered in the Survey. As such the estimated number of operational holdings & operated area on Input Survey, 2006-07 should be less than that of Agricultural census, 2005-06
- 3.2** The Input Survey was confined to resident cultivators only.
- 3.3** An operational holding may be treated wholly, partly or not treated at all with fertilizers /organic manures/ pesticides etc. For the purpose of the survey, holdings were classified as treated or not treated with fertilizers /organic manures /pesticides etc. Accordingly, partly treated holdings were also considered as wholly treated.
- 3.4** The ‘Purely Current Fallow’ holdings have not been included in the Input Survey contrary to Agricultural Census.

CHAPTER-FOUR

SUMMERY OF FINDINGS

DISPERSAL OF OPERATIONAL HOLDINGS

4.1 Distribution of Operational Holdings and Operated Area

4.1.1 According to Input Survey 2006-07, the total number of operational holdings was 9.18Lakh against the operated area of 8.52 ha. (excluding Institutional holdings). The corresponding figures as per Agriculture Census 2005-06 were 9.21Lakh against the operated area of 8.47 Lakh ha.

4.1.2 Thus both the surveys were close in estimating the total number of holdings and operated area in the country. Since in Input Survey, institutional holdings and other type of holdings, like holdings held by deemed cultivators are excluded, it is normally expected that the estimates of number and area of holdings as per Input Survey should be less than the corresponding data of Agriculture Census, although Input Survey is carried out after one year of the Agriculture Census.

4.2 Dispersal of Operational Holdings

4.2.1 A parcel has been defined as “all land entirely surrounded by land of other holdings or land not forming part of any holding”. It may consist of one or more cadastral units or fields and may not be synonymous with survey number. Three or four adjoining survey numbers could make one parcel but two survey numbers of the same village, not adjacent to each other, would make two parcels.

4.2.2 An operational holding may consist of one or more than one parcels. The more the number of parcels, the more scattered will be the operational holding. All the parcels comprising an operational holding may lie within the village of residence of the holder or might even be spread over one or more other villages.

4.2.3 The data on number of parcels was collected by interviewing the selected operational holder with a view to have information about the dispersal of operational holdings in different parts of the State. However, the outer limit for collecting the information in Input Survey was restricted to the district. Since an operational holding will have at least one parcel, the average number of parcels per operational holding cannot be less than one. The distribution of average number of parcels, average area per parcel and average area per holding in different size groups of as per Input Survey 2006-07, may be seen in the table 4.2.

Table 4.2: Average number of parcels, average area per parcel and area per holding

Sl. No.	Size Groups	No. of parcels per holding	Area per parcel (in ha.)	Area per holding (in ha.)
1.	Marginal	(2041136) 3.11	0.14	0.43
2.	Small	(1141875) 7.02	0.20	1.40
3.	Semi-Medium	(654956) 8.44	0.32	2.69
4.	Medium	(195306) 9.21	0.58	5.34
5.	Large	(23430) 20.23	0.72	14.58
6.	All size groups	(4056703) 4.42	0.21	0.92

Fig-1 Average Holding of parcels according to size groups

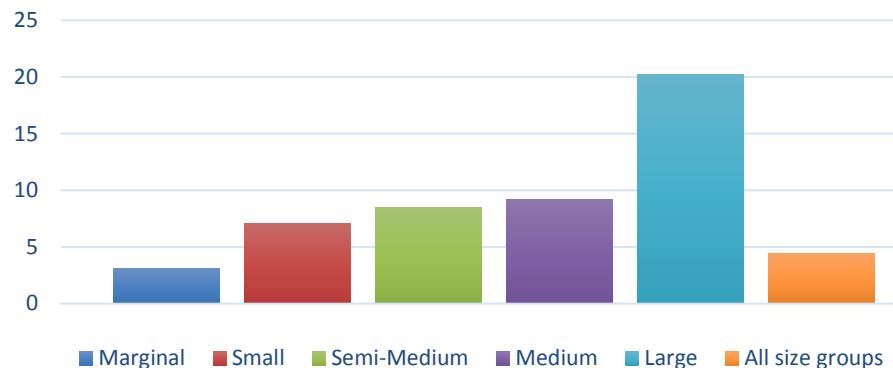

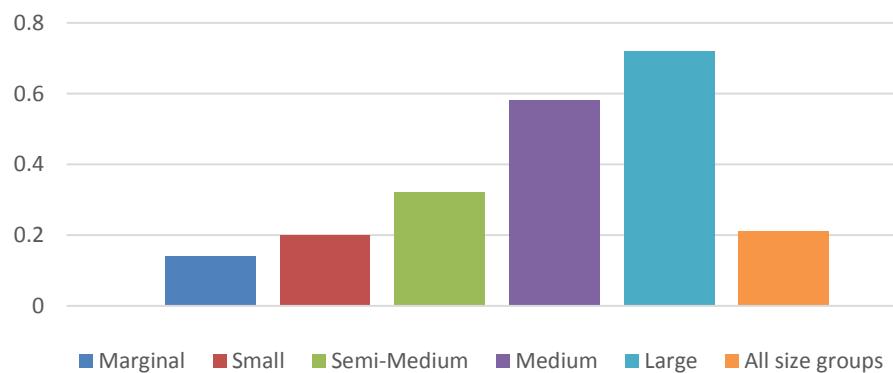

Fig-2 Average area of parcels according to size groups

4.2.4 From the table 4.2 it may be seen that the number of parcels per holding for all size groups was 4.42 in 2006-07 area per Parcel is 0.21 ha. and area per holding was 0.92 ha. This shows that the number of parcels per holding had decreased. This may be due to the selling of some of the parcels by the operational holders. The corresponding figures for marginal, small, semi-medium, medium and large holdings for 2006-07 were 3.11, 7.02, 8.44, 9.21 and 20.23 respectively.

4.2.5 The average area per parcel for all groups at all State level was 0.21 ha. during 2006-07. The corresponding figures (in hectare) for marginal, small, semi-medium, medium and large holdings in 2006-07 had been observed as 0.14, 0.20, 0.32, 0.58 and 0.72 respectively.

4.2.6 The average operated area per holding for all size groups at all State level was 0.92 ha. in 2006-07. The corresponding figures for marginal, small, semi-medium,

medium and large holdings in 2006-07 had been observed 0.43, 1.40, 2.69, 5.34 and 14.58ha.

4.3 Extent of Multiple Cropping

4.3.1 In State there are mainly two cropping seasons in a year viz., Kharif and Rabi. The Kharif season is normally spread from May to mid-October and the Rabi season is from mid-October to mid-April. A cultivator may raise two crops on his operational holding during the agriculture year-one in Kharif season and another in Rabi season. In some Districts during the period from May to April, more than two crops are also grown. Then the cultivator is said to have cropped his holding twice or more and gross cropped area will be twice or more the net area sown depending upon the number of times the crops have been taken. Similarly, when a cultivator raises three crops during the entire crop season, gross cropped area will be thrice the net sown area. In practice, multiple cropping has been found to have a positive correlation with the availability of irrigation facilities.

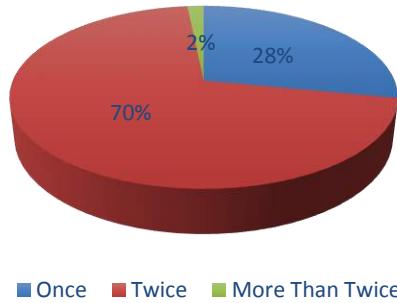

4.3.2 The percentage area cropped once was about 28.06 percent while cropped twice was 70.33 percent. The remaining net irrigated area i.e. cropped more than twice was 1.62 percent.

4.3.3 The percentage distribution of net sown area by Irrigated cropped once, twice and more than twice may be seen in the table 4.3.

Table 4.3: Distribution of net sown area by number of crops in Irrigated condition

Sl.No.	Size Groups	Percentage of area cropped			Net sown area
		Once	Twice	More Than Twice	
1.	Marginal	24.40	74.68	0.92	100.00
2.	Small	29.95	68.79	1.26	100.00
3.	Semi-medium	30.26	67.40	2.35	100.00
4.	Medium	28.62	69.39	2.00	100.00
5.	Large	20.51	78.72	0.77	100.00
6.	All sizes	28.06	70.33	1.62	100.00

Fig-3 Percentage Distribution of Area by crops in Irrigated condition

4.3.4 It may be seen from table 4.3 that the percentage of area cropped once to the net sown area was about 24.40 percent each in the case of marginal, 29.95 percent small, semi-medium holdings the highest one was about 30.26 percent in holding

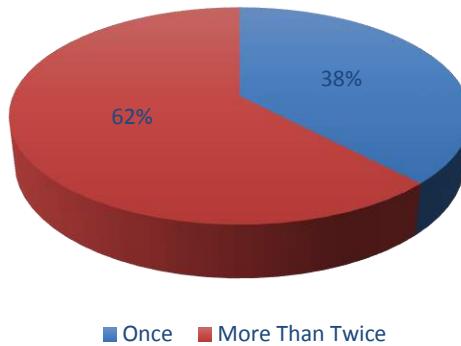

percentage. The medium holdings is 28.62 percent, the large holdings 20.51 percentage of about 28.06 percent. The percentage of area cropped once more or less decreased with the increase of size of holdings. The percentage of area cropped twice was the highest in the case of semi-medium holdings 67.40 percent and the lowest, i.e. about 78.72 percent in the case of large holding. The percentage of area cropped thrice was the highest in the case semi- medium holdings, i.e. 0.77 percent and lowest in the case of large holding.

4.3.5 The percentage distribution area by Un-Irrigated cropped once and more than twice may be seen in the table 4.4.

Table 4.4: Distribution of area by number of crops in Un-Irrigated condition

Sl. No.	Size Groups	Percentage of area cropped		Net Un irrigated area
		Once	More Than Twice	
1.	Marginal	32.14	67.76	100.00
2.	Small	38.43	61.57	100.00
3.	Semi-medium	44.36	55.72	100.00
4.	Medium	47.28	52.72	100.00
5.	Large	53.11	46.89	100.00
6.	All sizes	37.87	62.13	100.00

Fig-4Distribution of Area by crops in un-Irrigated condition

4.4 Cropping Pattern

4.4.1 In Input Survey 2006-07the State was specified a set of crops for collection of data on inputs use. These crops were selected on the basis of their importance in State depending upon the percentage of cropped area in relation to the gross cropped area. The data on major crops viz. Paddy, Maize, Wheat, Sugarcane and Ragi have been presented for the purpose of analysis. Thus the total of all these data of 'all crops'. The table 4.5(a) gives percentage distribution of gross cropped area under these crops for state by irrigation status.

4.4.2 From the table 4.4(a) it may be seen gross cropped irrigated and un-irrigated area was covered by these nine principal crops. In other words, about 0.77 percent of gross irrigated area and 1.98 percent of the gross un-irrigated area were covered under 'total oilseeds. In irrigated area, wheat was the most dominant crop having a share of

about 39.12 percent of area followed by paddy 33.53 percent, maize 0.46 percent, ragi 0.04 percent, Barley 0.09 percent, sugarcane 19.72 percent etc. In un-irrigated area also, wheat was the most common crop claiming 27.40 percent of gross cropped un-irrigated area which was followed by paddy 16.57 percent, ragi 17.82 percent, barley 0.26 percent, maize 5.15 percent.

4.4.3 Table 4.4(b) indicates that out of irrigated area under paddy in the State, the share of semi-medium holdings was the highest, 27.52 percent followed by marginal 25.23 percent, small 22.58 percent medium 21.39 percent, and large 3.27 percent. Similar in un-irrigated area under paddy in which the highest share was of marginal holdings 42.85percent followed by other categories of holdings. In the case of wheat crop the highest of irrigated area 26.64 percent was in the category of marginal holding followed by small 22.56 percent, semi-medium 26.39 percent, medium 20.78 percent and large holding 2.16 percent. In the case of un-irrigated area under wheat, marginal holdings was having the highest share of about 45.53 percent followed by small 29.18 percent, semi-medium 18.53 percent, medium 6.14 percent and large holdings 0.61 percent. In the case of ragi crop the highest holding is irrigated area 67.15 percent was in the category of marginal holding followed by small 29.95 and the medium holding 2.90 percent. The un-irrigated are under ragi in which the highest

share was of marginal 41.46 percent followed by small holding 30.87, semi-medium holding 20.60, medium holding 6.44 percent and large holdings 0.62 percent. Under maize the percentage of irrigated area to total cropped irrigated area was marginal holdings 28.06 percent, 30.49 percent in small, 26.74 percent in semi-medium about 14.71 percent in medium holdings. Similarly, in un-irrigated area under crop maize, marginal holdings were having the highest share of 43.86 percent followed by small 23.80 percent and semi medium holdings 20.74 percent. In the case of barley, the highest share of 43.97 percent of irrigated area was in the category of marginal followed by 23.44 percent in semi-medium 22.10 percent in the case of medium 10.49 percent. In un-irrigated area, the highest share was also in the medium category 43.54 percent followed by 29.37 percent in semi- medium, small 15.64 percent in the case of large 0.11 percent. In the case of sugarcane, which is normally grown in irrigated area, it has been observed that the share of irrigated area was the highest, 25.02 percent in the small holdings followed by medium 22.26 percent, marginal 19.93 percent and semi-medium about 13.17 percent. In the case of un-irrigated area under this crop, the percentage share of different holdings has decreased as the size of holdings has increased. Marginal holdings highest, 45.14 percent followed by semi medium 25.00 percent, small holdings 17.81 percent and medium 9.84 percent and large holding 2.16 percent.

CROPWISE USE OF INPUTS

4.6 Application of Chemical Fertilizer, Farm Yard Manure and Pesticides in Irrigated and Un-irrigated Areas

4.6.1 Chemical fertilizer is used to increase agricultural production and pesticides to protect the crops from insects and pests. Besides chemical fertilizers, organic manure is also used to raise the soil fertility. The most commonly used chemical fertilizers are Urea, Di-Ammonium Phosphate, Superphosphate, Potash, complex fertilizers, fertilizer mixture and micronutrient fertilizers like Ammonium Sulphate. On the other hand, Farm Yard Manure (FYM)/compost and oil cakes are the most common organic manures in use by the cultivators. The Input Survey data were collected separately for area under HYV and ‘Others’ and quantity of fertilizers used. Normally, the first dose of fertilizer is given at the sowing stage and subsequently one or two more applications are given to the crop. Thus, the same area may receive one or more applications of fertilizers but for the purpose of estimation of area fertilized, only net area under the crop in a particular season has been taken into account.

4.7 Percentage of Area Treated with Chemical Fertilizers, Farm Yard Manure and Pesticides

4.7.1 Table 4.7 gives the percentage of area treated with chemical fertilizers, FYM and pesticides to the corresponding total gross cropped area under ‘all crops’ separately for irrigated and un-irrigated.

Table 4.7: Percentage of Area Treated with Chemical Fertilizers, FYM and Pesticides for ‘All Crops’ in Irrigated and Unirrigated Areas

Sl. No.	Size Groups	Percentage of area treated with					
		Chemical Fertilizers		Farm Yard Manure		Pesticides	
		Irrigated	Unirrigated	Irrigated	Unirrigated	Irrigated	Unirrigated
1	Marginal (Below 1.0 ha.)	81.23	2.98	36.22	92.30	37.41	0.76
2	Small (1.0 – 1.99 ha.)	82.18	2.85	38.45	92.74	43.83	0.58
3.	Semi-medium(2.0 – 3.99 ha.)	96.43	3.74	29.67	89.31	57.01	1.29
4.	Medium (4.0 – 9.99 ha.)	64.50	8.65	21.08	84.36	63.58	2.44
5.	Large (10.0 ha. and above)	97.58	12.20	16.67	88.99	62.63	1.01
6.	All Size Groups	87.35	3.59	31.04	91.22	50.67	0.94

4.7.2 It may be seen from the table 4.7 that about 87.35 percent of the irrigated area to the corresponding total gross cropped irrigated area under ‘all size groups’ at state level was treated with different chemical fertilizers whereas about 3.59 percent was the corresponding figure for un-irrigated area. Similarly about 31.04 percent of the irrigated area to total gross cropped irrigated area under ‘all crops’ for ‘all sizes’ at state level was treated with FYM against the corresponding figure of 91.22 percent for un-irrigated area. In the case of pesticides about 50.67 percent of the irrigated area to total gross-cropped irrigated area in the state for all sizes was treated with pesticides while 0.94 percent in un-irrigated area.

4.7.3 Further the percentage of gross irrigated area treated with chemical fertilizers to the corresponding total gross irrigated area under various categories of holdings was rallying around 81.23 percent, in the case of marginal holdings 82.18 percent in the case of small holdings and 96.43 percent, in the case of semi-medium holdings about 64.50 percent of medium and 97.58 percent of large holdings. However, in un-irrigated area, the percentage distribution in marginal 2.98 percent and 2.85 percent in small size group in semi medium, medium and large size groups was unevenly distributed. Thus, the use of chemical fertilizers was much higher in irrigated area than in the un-irrigated area.

4.7.4 The percentage of irrigated area treated with FYM to the corresponding total gross cropped irrigated area was the highest in the case of small holdings 38.45 percent followed by marginal 36.22 percent, semi-medium 29.67 percent, medium 21.08 percent and large 16.67 percent, while the un-irrigated percentage was 92.30 percent in marginal holdings followed by small holdings 92.74 percent, semi-medium 89.31 percent, medium 84.36 percent and large 88.99 percent. In view of this, there was much difference in the pattern of application of FYM in irrigated and un-irrigated areas.

4.7.5 In the case of pesticides, the percentage of gross irrigated area treated with pesticides to total gross irrigated area was the highest in medium holdings 63.58 percent followed by large 62.63 percent, semi-medium holdings about 57.01 percent. Small 43.83 and marginal holdings is about 37.41 marginal holdings percent. The corresponding figure in un-irrigated area was the highest 2.44 percent in the category medium followed by large, semi-medium, small and marginal.

Paddy

4.7.6 The percentage distribution of area treated with Chemical Fertilizers, Farm Yard Manure and Pesticides to the corresponding gross cropped area separately for irrigated and un-irrigated at state level may be seen in the table 4.7(a).

Table 4.7(a):Percentage of Area Treated with Chemical Fertilizers, FYM and Pesticides for ‘Paddy’ in Irrigated and Unirrigated Areas

Sl. No . .	Size Groups	Percentage of area treated with					
		Chemical Fertilizers		Farm Yard Manure		Pesticides	
		Irrigated	Unirrigated	Irrigated	Unirrigated	Irrigated	Unirrigated
1.	Marginal(Below 1.0 ha.)	77.48	1.51	42.30	99.36	42.71	0.40
2.	Small (1.0 – 1.99 ha.)	76.27	1.82	41.71	98.92	43.02	0.17
3.	Semi-medium (2.0 – 3.99 ha.)	89.06	2.11	24.23	97.45	60.38	0.09
4.	Medium (4.0 – 9.99 ha.)	96.24	3.02	13.36	98.32	66.21	0.18
5.	Large (10.0 ha. and above)	99.96	2.27	10.30	99.19	60.98	1.46
6.	All Size Groups	85.07	1.79	30.11	98.84	53.05	0.27

4.7.7 From the above table, it is observed that 85.07 percent of the irrigated area under paddy was treated with chemical fertilizer for ‘all size groups’ at state level. The highest percentage of irrigated area treated with the fertilizer for this crop was in the category of large holdings 99.96 percent followed by medium 96.24 percent, semi-medium 89.86 percent, small 76.27 percent and 77.48 percent in the case of marginal holdings. In the case of percentage of un-irrigated area treated with chemical fertilizers to the corresponding gross cropped un-irrigated area for ‘all sizes’ at state level was 1.79 percent which is more less than the Chemical Fertilizers used in irrigated area.

4.7.8 Similarly, about 30.11 percent of the irrigated area for ‘all size groups’ at state level was treated with Farm Yard Manure against 98.89 percent in un-irrigated area. In this case, the percentage of irrigated area treated with FYM is less than the corresponding figures in un-irrigated area in each size group of holdings.

4.7.9 As regards pesticides, it may be seen that the application of pesticides in irrigated area was much higher than the corresponding un-irrigated area by virtue of the percentage of irrigated area treated with pesticides in ‘all size groups’ at state level was 52.60 against 0.51 in un-irrigated area. The similar phenomenon holds good in the case of other size groups of holdings like marginal, small, semi-medium, medium and large.

Wheat

4.7.10 The percentage distribution of area treated with Chemical Fertilizers, FYM and Pesticides under wheat separately for irrigated and un-irrigated area at state level may be seen in the table 4.7(b).

Table 4.7(b): Percentage of Area Treated with Chemical Fertilizers, FYM and Pesticides for ‘Wheat’ in Irrigated and Unirrigated Areas

Sl. No.	Size Groups	Percentage of area treated with					
		Chemical Fertilizers		Farm Yard Manure		Pesticides	
		Irrigated	Unirrigated	Irrigated	Unirrigated	Irrigated	Unirrigated
1.	Marginal(Below 1.0 ha.)	82.66	4.02	39.52	96.88	38.75	0.58
2.	Small (1.0 – 1.99 ha.)	82.34	3.28	37.37	97.36	45.17	0.40
3.	Semi-medium(2.0 – 3.99 ha.)	91.94	3.74	27.53	95.90	60.45	0.39
4.	Medium (4.0 – 9.99 ha.)	97.27	10.82	17.03	90.67	66.67	0.84
5.	Large (10.0 ha. and above)	99.95	7.91	13.94	93.87	62.78	1.45
6.	All Size Groups	88.70	4.19	30.27	96.44	52.60	0.51

4.7.11 It may be seen from the table 4.7(b) that about 88.70 percent of irrigated area under wheat, for ‘all size groups’ at state level was treated with chemical fertilizers against 4.19 percent in un-irrigated area. In the categories of medium and large holdings, the percentages of irrigated areas treated with chemical fertilizers were more than the corresponding figures in ‘other size’. In the categories of semi-medium and large, the percentage of irrigated area treated with chemical fertilizers was highest than the average percentage of 88.70. The percentage of un-irrigated area treated with chemical fertilizers has increased with the increase of size of holdings except for large.

4.7.12 The percentage of area under wheat treated with FYM was nearly 30.27 percent in irrigated and 96.44 percent in un-irrigated conditions. This table further shows that

the percentage of irrigated area treated with FYM was less in every size group as compared to the corresponding figures in un-irrigated area.

4.7.13 In the case of pesticides, about 52.60 percent of the gross irrigated area for ‘all size groups’ at state level was treated with pesticides against 0.51 percent in un-irrigated area. This table further shows that the use of both pesticides was more in irrigated area than in un-irrigated area.

Ragi

4.7.14 The percentage distribution of area treated with chemical fertilizers, FYM and pesticides in both irrigated and un-irrigated area separately for different size groups of holdings at state level may be seen in the table 4.7(c).

Table 4.7(c): Percentage of Area Treated with Chemical Fertilizers, FYM and Pesticides for ‘Ragi’ in Irrigated and Unirrigated Area

Sl. No.	Size Groups	Percentage of area treated with					
		Chemical Fertilizers		Farm Yard Manure		Pesticides	
		Irrigated	Unirrigated	Irrigated	Unirrigated	Irrigated	Unirrigated
1.	Marginal(Below 1.0 ha.)	0.72	0.18	100.00	85.14	0.00	0.45
2.	Small(1.0 – 1.99 ha.)	0.00	0.10	100.00	84.80	0.00	0.26
3.	Semi-medium(2.0 – 3.99 ha.)	0.00	0.00	0.00	80.91	0.00	0.27
4.	Medium (4.0 – 9.99 ha.)	0.00	0.52	100.00	76.54	0.00	2.28
5.	Large (10.0 ha. and above)	0.00	0.00	0.00	86.73	0.00	0.00
6.	All Size Groups	0.48	0.14	100.00	83.62	0.00	0.47

4.7.15 From the table 4.7(c), it may be observed that the percentage of gross irrigated area treated with chemical fertilizers to total gross cropped irrigated area in all size groups of holdings at State level was about 0.48. It may be only in the case marginal holdings 0.72 percent other holdings is zero. In the case of un-irrigated area, the percentage of area treated with chemical fertilizers to the corresponding gross un-irrigated area for ‘all size groups’ at state level was 0.14 which was more or less equal to the figures falling in the categories of marginal, small, medium holdings. However, the percentage of un-irrigated area treated with chemical fertilizers was the lowest in the case of small holdings 0.10 percent.

4.7.16 In the case of Farm Yard Manure, the percentage of irrigated area treated to the gross cropped irrigated area in each size group of holdings viz. marginal, small and semi-medium is about 100% and an overall percentage of 100 percent. In the case of un-irrigated area the percentage of FYM in different size groups of holdings is about 83.62 percent near about similar to all size groups.

4.7.17 As regards pesticides, it may be seen that the pesticides not used irrigated area in Ragi and un-irrigated area used in 0.47 percent all size groups at state level.

Maize

4.7.18 The table 4.7(d) given below gives the percentage of area treated with chemical fertilizers farm yard manure and pesticides to the corresponding gross cropped area separately for irrigated and un-irrigated area at State level.

Table 4.7(d): Percentage of Area Treated with Chemical Fertilizers, FYM, and Pesticides for ‘Maize’ in Irrigated and Unirrigated Areas

Sl. No.	Size Groups	Percentage of area treated with					
		Chemical Fertilizers		Farm Yard Manure		Pesticides	
		Irrigated	Unirrigated	Irrigated	Unirrigated	Irrigated	Unirrigated
1	Marginal(Below 1.0 ha.)	78.85	13.83	51.69	85.96	21.44	1.90
2	Small (1.0 – 1.99 ha.)	78.51	18.59	44.46	86.36	42.84	1.04
3.	Semi-medium (2.0 – 3.99 ha.)	87.98	16.67	50.39	81.50	33.44	2.56

4.	Medium (4.0 – 9.99 ha.)	98.88	25.89	21.57	74.85	52.94	1.90
5.	Large (10.0 ha. and above)	0.00	4.14	0.00	68.89	0.00	0.94
6.	All Size Groups	84.14	16.62	44.71	83.75	35.81	1.82

4.7.19 From the table 4.7(d), it may be seen that the percentage of irrigated area treated with chemical fertilizers to the corresponding gross cropped irrigated area for ‘all size groups’ at State level was about 84.14 percent against about 16.62 percent in un-irrigated area. The percentage of irrigated area treated with chemical fertilizers to the corresponding gross cropped irrigated area in each size group of holdings was found 78.85 percent in the case of marginal holding, 78.51 percent in the case of small holding, 87.98 percent in the case of semi-medium holding and 98.88 percent in the case of medium holdings. However, the percentage of un-irrigated area treated with chemical fertilizers to the corresponding gross cropped un-irrigated area was the lowest 4.14 percent in the case of large holdings and the highest in the case of medium holdings 25.89 percent. This table further shows that a greater percentage of area was treated with chemical fertilizers in irrigated conditions than in un-irrigated area in every size group of holdings.

4.7.20 As regards the percentage of irrigated area treated with farm yard manure to the corresponding gross cropped irrigated area for all sizes at State level, it was 44.71 percent against 83.75 percent in un-irrigated area. From the table it appears that the percentage of area treated with farm yard manure in un-irrigated conditions was more than the corresponding figures in irrigated conditions in each size group of holdings except small.

4.7.21 The percentage of irrigated area treated with pesticides in ‘all size groups’ of holdings at State level was about 35.81 percent against about 1.82 percent in un-irrigated conditions. The percentage distribution of irrigated area treated with pesticides shows that the semi-medium holdings have used much pesticides as compared to other types of holdings. The percentage distribution of un-irrigated area to the corresponding gross cropped un-irrigated area for ‘all size groups’ at State level was merely 1.82 percent.

Jobstears

4.7.22 The percentage distribution of area treated with various chemical fertilizers, farm yard manure, pesticides and IPM to the corresponding gross cropped area separately for irrigated and un-irrigated area at All India level may be seen in the table 4.7(e).

Table 4.7(e): Percentage of Area Treated with Chemical Fertilizers, FYM, Pesticides for ‘Jobtears’ in Irrigated and Unirrigated Areas

Sl. No.	Size Groups	Percentage of area treated with					
		Chemical Fertilizers		Farm Yard Manure		Pesticides	
		Irrigated	Unirrigated	Irrigated	Unirrigated	Irrigated	Unirrigated
1.	Marginal (Below 1.0 ha.)	0.00	0.03	100.00	98.49	20.00	0.57
2.	Small(1.0 – 1.99 ha.)	0.00	0.06	100.00	97.90	0.00	0.11
3.	Semi-medium(2.0 – 3.99 ha.)	0.00	0.02	100.00	96.12	0.00	0.26
4.	Medium(4.0 – 9.99 ha.)	100.00	0.35	100.00	89.84	0.00	0.14
5.	Large(10.0 ha. and above)	0.00	0.00	0.00	100.00	0.00	0.00
6.	All Size Groups	2.78	0.06	100.00	97.19	16.67	0.32

4.7.23 From the table 4.7(e), it may be seen that the chemical fertilizers was used only 100 percents semi-medium holdings and un-irrigated area for all size groups at state level was 0.06 percent.

4.7.24 In the case of Farm Yard Manure the percentage of irrigated area treated with the manure for all size groups at State level was 100.0 percent whereas in the un-irrigated area the corresponding figure was 97.19 percent. It may be seen that in the case of FYM, the percentage of un-irrigated area treated with corresponding gross cropped un-irrigated area was more as compared to the area treated under irrigated conditions in each size group of holdings.

4.7.25 In the caseof crop jobstears it is treated by pesticides in irrigated the all size group at state level was 16.67 and un-irrigated 0.32 percent.

Sugarcane

4.7.26The percentage distribution of area treated with chemical fertilizers, farm yard manure, pesticides and IPM in irrigated and un-irrigated area separately for different size classes of holdings at All India level may be seen in the table 4.7(g).

Table 4.7(g): Percentage of Area Treated with Chemical Fertilizers, FYM and Pesticides for ‘Sugarcane’ in Irrigated and Unirrigated Areas

Sl. No.	Size Groups	Percentage of area treated with					
		Chemical Fertilizers		Farm Yard Manure		Pesticides	
		Irrigated	Unirrigated	Irrigated	Unirrigated	Irrigated	Unirrigated
1.	Marginal(Below 1.0 ha.)	100.00	7.57	15.37	100.00	25.80	0.00
2.	Small(1.0 – 1.99 ha.)	99.17	85.86	38.40	53.54	46.72	0.00
3.	Semi-medium(2.0 – 3.99 ha.)	99.19	35.97	43.29	92.81	55.17	0.00
4.	Medium(4.0 – 9.99 ha.)	98.79	100.00	40.77	58.18	60.89	0.00
5.	Large(10.0 ha. and above)	99.94	0.00	46.14	100.00	69.38	0.00
6.	All Size Groups	99.27	37.59	35.98	85.79	48.71	0.00

4.7.27From the table 4.7(g) it may be seen that the percentage of irrigated area treated with chemical fertilizers to the corresponding gross cropped irrigated area at state level for all sizes was about 99.27 percent against 37.59 percent in un-irrigated area. This indicates that 100% of gross cropped irrigated area and treated with chemical fertilizers. The percentage distribution of un-irrigated area treated with chemical fertilizers was the highest, 100 percent in medium holdings,85.86percent in small holding, 35.97 percent in semi-medium holding with the lowest one in the category of marginal holdings 7.57 percent.

4.7.28. In the case of farm yard manure, the percentage of irrigated area treated with this input to gross cropped irrigated area for ‘all sizes’ at state level was 35.98 percent against 85.79 percent in un-irrigated area. Further the percentage of irrigated area treated with FYM to gross cropped irrigated area was evenly distributed among different size groups of holdings and the percentage was more or less rallyng round to 15 to 46 percent. In the case of un-irrigated area, the highest percentage of area treated was in the category of medium holdings 58.18 percent, semi-medium92.81percent, small 53.54 percent, marginal and large holdings is 100 percent.

4.8 Rate of application of Fertilizer Nutrient (N,P,K) and FYM in Irrigated and Un-irrigated Areas All Crops

4.8.1 The table 4.8 gives the break-up of rate of application of Nitrogen(N), Phosphate(P) and Potash(K00) and FYM for ‘all crops’ in irrigated and un-irrigated areas. The data has been computed from estimated use of various types of fertilizers by taking into account the nutrient content in each type of fertilizer. The rate of application of fertilizer nutrients like N,P,K and FYM has been calculated by dividing the quantity of each nutrient, i.e. N,P,K and FYM consumed in irrigated and un-irrigated areas separately with the corresponding gross cropped irrigated and un-irrigated areas.

Table 4.8:Rate of Application of Fertilizer Nutrients (N,P,K) and FYM in Irrigated and Unirrigated Areas in All Crops

Sl. No.	Size Groups	Kgs/hectare)							
		N		P		K		FYM	
		Irrigated	Unirrigated	Irrigated	Unirrigated	Irrigated	Unirrigated	Irrigated	Unirrigated
1.	Marginal (Below 1.0 ha.)	40.58	2.25	8.94	0.86	59.59	0.00	286.46	645.53
2.	Small (1.0 – 1.99 ha.)	16.78	0.90	4.58	1.78	20.34	0.08	311.12	584.97
3.	Semi-medium (2.0 – 3.99 ha.)	12.47	0.81	4.91	2.48	35.79	0.14	238.07	553.28
4.	Medium (4.0 – 9.99 ha.)	7.19	0.93	2.75	1.05	31.85	0.06	169.04	513.08
5.	Large (10.0 ha. and above)	2.46	0.26	1.00	0.34	32.43	0.00	116.67	410.85
6.	All Size Groups	19.08	1.46	5.12	1.36	37.42	0.06	248.04	597.59

4.8.2 From the above table 4.8, it may be seen that the use of N for ‘all crops’ and all size groups at all state level was 19.08 kg./ha. in irrigated area against 1.46 kg./ha. in un-irrigated area. Whereas the corresponding figures for marginal, small, semi-medium, medium and large holdings in irrigated area were 40.58, 16.78, 12.47, 7.19 and 2.46 kg./ha. against 2.25, 0.90, 0.81, 0.93 and 0.26 kg./ha. in un-irrigated areas. This indicates that the rate of application of N (kg./ha.) was uniformly higher in irrigated area as compared to that of in un-irrigated area. This table also indicates that the rate of application of N in un-irrigated area has decreased with the increase of size of holdings.

4.8.3 The use of P for all size groups at state level for ‘all crops’ in irrigated area was 5.12 kg./ha. against 1.36 kg./ha. in un-irrigated area. Its use of P (kg./ha.) in irrigated area for various size groups of holdings was 8.94, 4.58, 4.91, 2.75 and 1.00 respectively for marginal, small, semi-medium, medium and large holdings against 0.86, 1.28, 2.48, 1.05 and 0.34 in un-irrigated area. This clearly shows that in irrigated areas, the rate of application of P (kg./ha.) has decreased with the increase in size of holdings.

4.8.4 The use of Potash (K) in ‘all crops’ for all sizes of holding at state level was 37.42 kg./ha. in irrigated area against 0.06 kg./ha. in un-irrigated area. Its use of K (kg./ha.) in irrigated area for various size groups of holdings was 59.59, 20.34, 35.79, 31.85 and 32.43 respectively for marginal, small, semi-medium, medium and large holdings against 0.08, 0.14 and 0.06 for small, semi-medium, medium holdings in un-irrigated area.

4.8.5 The use of FYM for all holdings at state level for ‘all crops’ in irrigated area was 798.99 kg./ha. Against 655.10 kg./ha. in un-irrigated area. whereas the corresponding figures for marginal, small, semi-medium, medium and large holdings

in irrigated area were 286.46, 311.12, 238.07, 169.04 and 116.67 kg./ha. against 645.53, 584.97, 553.28, 513.08 and 410.85 kg./ha. in un-irrigated areas.

4.8.6 The rate of application of N,P,K and Farm Yard Manure (FYM) for paddy in irrigated and un-irrigated areas at All India level may be seen in table 4.8(a).

Table 4.8(a): Rate of Application of Fertilizer Nutrients (N,P,K) and FYM in Irrigated and Un-irrigated Areas in Paddy

Sl. No.	Size Groups	N		P		K		FYM	
		Irrigated	Unirrigated	Irrigated	Unirrigated	Irrigated	Unirrigated	Irrigated	Unirrigated
1.	Marginal (Below 1.0 ha.)	38.73	1.45	7.28	0.01	3.23	0.00	330.16	755.92
2.	Small (1.0 – 1.99 ha.)	15.42	0.75	2.82	0.02	1.10	0.00	320.14	670.53
3.	Semi-medium (2.0 – 3.99 ha.)	11.36	0.56	3.71	1.53	1.53	0.00	178.05	649.78
4.	Medium (4.0 – 9.99 ha.)	6.40	0.64	2.16	0.02	0.80	0.00	105.30	696.56
5.	Large (10.0 ha. and above)	2.15	0.13	0.98	0.01	0.42	0.00	66.16	730.96
6.	All Size Groups	18.27	1.04	4.05	0.02	1.70	0.00	230.63	708.86

4.8.7 From the above table 4.8(a), it may be seen that the rate of application (kg./ha.) of N for paddy for all size groups at State level in irrigated area was 27.81 against 0.72 in un-irrigated area with the corresponding figures for marginal, small, semi-medium, medium and large holdings were 39.88, 22.54, 24.23, 25.93 and 22.15 in irrigated area against 1.28, 0.36, 0.32, 0.34 and 0.07 in un-irrigated area. This indicates that the rate of application of N in irrigated area was more than the corresponding figures in un-irrigated area in each size group of holdings. The rate of application of N(kg./ha.) in irrigated area was the highest in the case of marginal holding (39.88) followed by large holding (22.15), small (22.54), semi-medium (24.23) and medium (25.93). On the other hand, the rate of application of N in un-irrigated area was the highest in marginal holdings (1.28 kg./ha.) followed by large (0.07), semi-medium 0.32), medium (0.34) and small (0.36). This shows that the application of N in un-irrigated area has decreased with the increase in the size of operational holding except in the case of large holding.

4.8.8 The rate of application of P in irrigated area for all sizes at State level was 4.05 kg./ha. against 0.02 kg./ha. in un-irrigated area. The highest rate of application of P in irrigated area was in the case of marginal holdings 7.28 kg./ha. and has decreased with the in size holdings except semi-medium where the rate of application was 3.71 kg./ha. The rate of application of P in un-irrigated area varied between 0.01 kg./ha. in marginal holdings to 0.02kg./ha. in the case of large holdings. This indicates that the rate of consumption of P in un-irrigated area has increased with the decrease in the size of operational holding.

4.8.9 For Potash (K), which is used comparatively less in quantity by the farmers in their agricultural production, it was found that the rate of application of K in irrigated area for all sizes at State level was 1.70 kg./ha. as compared to 0.00 kg./ha. in un-irrigated area

4.8.10In the case of application of FYM in irrigated area for all sizes at State level, it 230.63 kg./ha. against 708.86 kg./ha. in un-irrigated area. The highest rate of

application of FYM was in the category of marginal holdings 330.16 kg./ha. and the lowest one was in the large category 66.16 kg./ha. This indicates that the rate of application of FYM has differed in every holdings. Similar pattern has been found in the case of un-irrigated area as well where the rate of application was the highest in the marginal category 755.92 kg./ha. followed by other kinds of holdings. Like medium 696.56 kg/ha., small 670.53 kg/ha., semi-medium 649.78 kg/ha. and large 730.96 kg/ha.

Wheat

4.8.11The rate of application of N,P,K and FYM (in kg./ha.) for wheat in irrigated and un-irrigated areas at state level as per Input Survey 2006-07is given in table 4.8(b).

Table 4.8(b): Rate of Application of Fertilizer Nutrients (N,P,K) and FYM in Irrigated and Un-irrigated Areas in Wheat

Sl. No.	Size Groups	(Kgs/hectare)							
		N		P		K		FYM	
		Irrigated	Unirrigated	Irrigated	Unirrigated	Irrigated	Unirrigated	Irrigated	Unirrigated
1	Marginal (Below 1.0 ha.)	40.50	2.48	7.25	0.01	3.09	0.00	315.96	700.38
2	Small (1.0 – 1.99 ha.)	16.09	0.87	3.36	0.02	1.14	0.00	298.02	650.50
3.	Semi-medium (2.0 – 3.99 ha.)	11.59	0.74	4.43	0.02	1.69	0.00	220.99	649.64
4.	Medium (4.0 – 9.99 ha.)	6.16	0.83	2.49	0.06	0.99	0.00	138.94	631.91
5.	Large (10.0 ha. and above)	1.99	0.34	0.81	0.05	0.46	0.00	102.05	508.68
6.	All Size Groups	18.83	1.57	4.41	0.02	1.75	0.00	242.31	671.04

4.8.12It may be observed from the above table that the rate of application of N for wheat in irrigated area for all sizes at State level was about 18.83 kg./ha. against 1.57 kg./ha. in un-irrigated area. The rate of application of N (kg./ha.) in irrigated area was the marginal holdings 40.50, small 16.09, semi-medium 11.59, medium 6.16, and large 1.99. In un-irrigated area, the rate of consumption of N was the highest in the case of marginal holdings 2.48 kg./ha. and the lowest in the large holdings 0.34 kg./ha. This indicates that the rate of application of N in un-irrigated area has decreased with the increase in size of holdings.

4.8.13The rate of application of P for all size groups at State level in irrigated area was 4.41 kg./ha. Against 0.02 kg./ha. in un-irrigated area. The rate of application of P in irrigated area was the highest in the case of marginal holdings 7.25 kg./ha. followed by semi-medium4.43 kg./ha., small3.36 kg./ha., large 0.81 kg./ha. and medium2.49 kg./ha. In the case of un-irrigated area, the rate of application of P is very poor.

4.8.14The rate of application of Potash (K) in irrigated area for all sizes at state level was 1.75 kg./ha. There is no use of Potash in un-irrigated area. The use of K in irrigated area was the highest in the case of semi-medium holdings 1.69 kg./ha. followed by other holdings.

4.8.15As regards use of FYM, it may be seen from the table that the rate of application in irrigated area for all sizes at State level was 242.31 kg./ha. against 671.04 kg./ha. in un-irrigated area. The rate of application of farm yard manure was the highest in the case of marginal holdings 315.96 kg./ha. in irrigated area with the lowest one in of large holdings 102.05 kg./ha. This indicates that the rate of application of FYM has different in every size of groups.

Sugarcane

4.8.16 The rate of application of N,P,K and FYM (in kg./ha.) for wheat in irrigated and un-irrigated areas at state level as per Input Survey 2006-07 is given in table 4.8(c).

Table 4.8(c): Rate of Application of Fertilizer Nutrients (N,P,K) and FYM in Irrigated and Un-irrigated Areas in Sugarcane

Sl. No.	Size Groups	(Kgs/hectare)							
		N		P		K		FYM	
		Irrigated	Unirrigated	Irrigated	Unirrigated	Irrigated	Unirrigated	Irrigated	Unirrigated
1	Marginal (Below 1.0 ha.)	44.68	13.08	7.57	0.00	1.67	0.00	131.00	825.90
2	Small (1.0 – 1.99 ha.)	16.98	35.83	5.43	1.12	0.95	0.00	360.22	631.31
3.	Semi-medium (2.0 – 3.99 ha.)	12.37	4.19	5.32	0.00	1.41	0.00	390.29	658.99
4.	Medium (4.0 – 9.99 ha.)	7.57	6.11	3.21	1.33	0.90	0.00	345.33	578.18
5.	Large (10.0 ha. and above)	4.46	0.00	2.05	0.00	0.80	0.00	435.91	1316.67
6.	All Size Groups	18.74	13.94	5.28	0.33	1.22	0.00	321.81	735.58

4.8.17 From the table 4.8(g), it may be seen that the rate of application of N for all sizes at state level in irrigated area was 18.74 kg./ha. against 13.94kg./ha. in un-irrigated area. The highest rate of application of N was in the category of marginal holdings 44.68kg./ha. and the lowest in large category 4.46kg./ha. The table indicates that the rate of application of N for un-irrigated area for marginal, small, semi-medium and medium holdings are 13.08,35.83,4.19,6.11respectively.

4.8.18 As regards P, the rate of application for all sizes at state level in irrigated area was 5.28 kg./ha. against 0.33 kg./ha. in un-irrigated area. The highest rate of application in irrigated area was in the category of marginal holdings 7.57kg./ha. and the lowest in large holdings 2.05kg./ha. In un-irrigated area, the rate of application of P was the highest in medium holdings 1.33 kg./ha. followed by small 1.12kg./ha.

4.8.19 The rate of application of K for all sizes at state level in irrigated area was 1.22kg./ha. against was not in un-irrigated area. The rate of application in irrigated area was the highest in the case of marginal holdings 1.67kg./ha., followed by small, semi-medium, medium and large holdings. This indicates that the rate of application of K in irrigated area has decreased with the increase in the size of holdings.

4.8.20 The rate of application of FYM for all sizes at state level in irrigated area was 321.81kg./ha. against 735.58kg./ha. in un-irrigated area. The rate of application in irrigated area was the highest 435.91kg./ha. in large category and the lowest one was 131.00kg./ha. in marginal holdings. The table shows that the rate of application of FYM in irrigated area has decreased with the increase in the size of holdings. In the case of un-irrigated area, the rate of application was the highest in the case of large holdings 1316.67kg./ha. followed by marginal 825.90 kg/ha., medium 578.18 kg./ha., semi-medium 658.99kg./ha. and small 631.31. The use of FYM in irrigated area was consistently more than the un-irrigated area over all types of operational holdings.

4.8.21 The chemical fertilizer was not applied in crop Maize, Ragi, Sanwa and Barely which was show in hill area. The rate of application of FYM in their crops in irrigated

and un-irrigated areas for crops Maze, Ragi Sanwa and Barely in marginal, small, semi-medium, medium and large category are show in the followings table:-

Table 4.8(d): Rate of Application of FYM in Irrigated and Unirrigated Areas in different crops

(Kgs/hectare)

Sl. No.	Size Groups	Maize		Ragi		Sanwa		Barely	
		Irrigated	Unirrigated	Irrigated	Unirrigated	Irrigated	Unirrigated	Irrigated	Unirrigated
1	Marginal (Below 1.0 ha.)	337.89	565.96	753.24	531.08	1006.67	605.89	673.60	656.45
2	Small (1.0 – 1.99 ha.)	282.43	503.95	516.13	476.34	1000.00	573.41	572.38	589.41
3.	Semi-medium (2.0 – 3.99 ha.)	289.98	470.41	0.00	447.10	533.33	545.98	230.30	531.55
4.	Medium (4.0 – 9.99 ha.)	130.53	383.75	633.33	419.89	900.00	480.43	163.83	490.09
5.	Large (10.0 ha. and above)	0.00	308.08	0.00	437.63	0.00	535.56	0.00	471.48
6.	All Size Groups	277.66	509.13	678.65	489.13	964.60	572.49	498.45	596.52

LIVESTOCK, AGRICULTURAL IMPLEMENTS & MACHINERY

4.9 Livestock

4.9.1 The total number of cattle, buffaloes, sheep, goats, horses and ponies, mules, donkeys, pigs and others possessed by the operational holders during 2006-07 in state for all size groups were 7.23 lakh, 5.85 lakh, 2.48 lakh, 13.38 lakh, 0.52 lakh, 0.15 lakh, 0.01lakh and 0.06lakh respectively. The number of cattle possessed by the operational holders was the highest 5.04 lakh in the case of marginal holdings followed by small 1.36 lakh, semi-medium 0.64 lakh, medium 0.17 lakh and large 0.008 lakh. This indicates that the number of cattle possessed by the operational holders has decreased with the increase in the size of holdings. The number of buffaloes kept by the operational holders during 2001-02 was the highest in the case of marginal holdings 3.92 lakh, followed by small 1.18 lakh, semi-medium 0.57 lakh, medium 0.16lakh and large holdings 0.008 lakh respectively. This indicates that the number of buffaloes have decreased with the increase in the size of holdings.

Table 4.9: Estimated number of livestock held by the Operational holders

Sl. No.	Size groups	No. of Operational Holdings	No. of Cattle	No. Of Buffalos	Sheep	Goats	Horse And Ponies	Mules	Donkeys	Pigs
		1	2	3	4	5	6	7	8	9
1.	Marginal	656136	504237	392452	146486	953216	0	33526	1196	5253
2.	Small	162575	136568	118069	58709	250552	8008	11777	0	815
3.	Semi-medium	77556	64746	57803	32343	108261	5458	5386	149	124
4.	Medium	21206	17054	16453	10244	25658	1887	1823	35	0
5.	Large	1158	877	863	218	1003	21	24	0	0
6.	All Size Groups	918631	723482	585640	248000	1338690	15374	52536	1380	6192

4.9.2 The number of sheep kept during 2006-07by the operational holders was the highest in the case of marginal holdings 1.46 lakh, followed by small 0.58 lakh, semi-medium 0.32 lakh, medium 0.10 lakh and large holdings 0.002 lakh against 2.48 lakh for all size groups of holdings.

4.9.3 The number of goats reared by the operational holders during 2006-07 was also the highest in the case of marginal holdings 9.53 lakh, followed by small 2.50 lakh, semi-medium 1.08lakh, medium 0.25 lakh and large 0.01 lakh against 13.38 lakh for all size groups of holdings. The number of horse and ponies, mules, donkeys, pigs and other live stocks was decrease with the increase of size of holdings.

4.10 Agricultural Implements and Machinery

4.10.1The number of Hand Operated Implement used by marginal, small, semi-medium, medium and large holdings was 9.32lakh, 2.57lakh, 1.38lakh, 0.43lakh and 0.02lakh respectively against 1.37lakh for ‘all sizes’ at state level. Animal Operated Implement used by marginal, small, semi-medium, medium and large holdings was 10.15 lakh, 2.92 lakh, 1.36 lakh, 0.36 lakh and 0.02 lakh respectively against 1.48 lakh for ‘all sizes’ at state level. Power Operated Implement/Equipment used by marginal, small, semi-medium, medium and large holdings was 1.69 lakh, 1.03 lakh, 1.07 lakh, 0.59 lakh and 0.03 lakh respectively against 4.43 lakh for ‘all sizes’ at state level. Miscellaneous used by marginal, small, semi-medium, medium and large holdings was 0.02 lakh, 0.01 lakh, 0.01 lakh, 0.01 lakh and 0.01 lakh respectively against 0.07 lakh for ‘all sizes’ at state level.

4.11 Institutional Credit

4.11.1As per Input Survey 2006-07, the percentage of estimated number of operational holders who took institutional credit for agricultural purposes from various institutions to the corresponding total number of operational holdings was 10.25 for all sizes at state level against 6.74 for marginal, 14.62 for small, 23.22 for semi-medium, 36.26 for medium and 41.71 for large holdings.

Sl. No	Size Groups (Ha)	Percentage of Operational Holdings That Took Institutional Credit	Percentage of Operational Holdings That Took Credit From			
			PACS*	PLDB/ SLDB*	CBB*	RRBB*
1	2	3	4	5	6	7
1	Below 1.0	6.74	1.84	0.17	1.19	3.59
2	1.0 - 1.99	14.62	3.01	0.42	2.63	8.77
3	2.0 - 3.99	23.22	4.98	0.58	3.86	14.85
4	4.0 - 9.99	36.26	6.45	0.55	4.64	26.66
5	10 and Above	41.71	8.46	1.12	8.89	23.23
All Groups		10.25	2.43	0.26	1.76	6.01

4.12 Seeds

4.12.1As per Input Survey 2006-07, out of the total 9.18 lakh operational holdings, the number of holdings who used certified seeds, notified seeds and hybrid seeds for all size groups at all state level were 1.90 lakh, 0.02 lakh and 0.01 lakh respectively whereas the number of holdings who took foundation programmers were 0.20 lakh. The largest number of holders who used certified seeds were in the category of marginal holdings, 1.14 lakh followed by small 0.37 lakh, semi-medium 0.26 lakh, medium 0.11 lakh and large 0.06 lakh. Similarly, out of the total 0.02 lakh holders who used notified seeds, the highest number of holders were in the category of marginal holdings 0.01 lakh. In the similar way, out of the total of 0.01 lakh holders who used hybrid seeds, the maximum number of holders belonged to the marginal category 0.01 lakh. This analysis shows that in the case of certified, notified and hybrid seeds, the numbers of holders have decreased with the increase in the size of holdings, i.e. the marginal holders have been much benefited by such varieties of seeds followed by small and other categories. Similar trend has been observed in the case of foundation program me also where the maximum number of holders belonged to marginal category, i.e. 4.8 lakh followed by small 0.04 lakh, semi-medium 0.02 lakh and medium 0.01 lakh out of 0.20 lakh holders. In this programmer also, the highest number of beneficiaries belonged to the category of marginal holdings, followed by small, semi-medium, medium and large holdings.

CHAPTER-FIVE

DISTRICTWISE STATUS

5.1 The tables 5.1 (a) to 5.1 (e) presents district wise status on distribution of parcels, multiple cropping use of inputs and livestock on selected indicators.

Table 5.1 District wise estimated No. of parcels per operational holdings and average area per parcels by size groups.

Sl. No.	District Name	Total number of Parcels	Average number of parcels per holding	Average area per Parcel	Average area per holding
1	2	3	4	5	6

Table 10
Estimated Number of Operational Holders by Educational Status

SI No.	Size Group	Total Number of Holders	Educational Qualification of Operational Holder						
			Illiterate	Upto Class V	Middle	Secondary	Senior Secondary	Technical Diploma below degree level	Graduate & Above
1	2	3	4	5	6	7	8	9	10
1	Below 1.0	656136	140374	177109	185371	101069	36688	14774	751
2	1.0 - 1.99	162575	28341	38416	45823	32515	12657	4332	491
3	2.0 - 3.99	77556	15621	15254	19078	16111	7547	3832	113
4	4.0 - 9.99	21206	4948	3309	4876	4150	2461	1462	0
5	10 and Above	1158	389	123	329	125	92	79	21
All Groups		918631	189673	234211	255477	153970	59445	24479	1376

Check point: 1. Col 3=Cols (4+5+6+7+8+9+10).
 2. Col3 must be equal to Col 3 of T:

Table 11
Average Age of Operational Holder (years).

SI No.	Size Group	Total Number of Holders	Distribution of Operational Holder (no.) in different Age Groups with Average Age (years)							
			Age Group1 (Below 18 yrs)	Age Group2 (18-30 yrs)	Age Group3 (31-40 yrs)	Age Group4 (41-50 yrs)	Age Group5 (51-60 yrs)	Age Group6 (61-65 yrs)	Age Group7 (66 yrs & above)	Average Age (years)
1	2	3	4	5	6	7	8	9	10	11
1	Below 1.0	656136	0	23032	111168	221535	177447	63205	59749	49.49
2	1.0 - 1.99	162575	0	4490	20168	52155	49534	18023	18205	51.17
3	2.0 - 3.99	77556	0	2385	10025	23195	23259	8700	9992	51.41
4	4.0 - 9.99	21206	0	428	2283	5723	6208	2964	3600	53.18
5	10 and Above	1158	0	32	52	288	377	247	162	54.59
All Groups		918631	0	30367	143696	302896	256825	93139	91708	50.04

- Check point: 1. Column 3 = Column 3 of Table 1.
 2. Individually Columns 4, 5, 6, 7, 8, 9 and 10 should be less than or equal to Column 3.
 3. Columns 4+5+6+7+8+9+10 =Column 3.

Table 12
Average Size of Household of Operational Holders (no.)

Sl No.	Size Group	Total Number of Holders	Size of Household of Operational Holder(no.) with Average							
			Family Group1 (Upto 3)	Family Group 2 (4- 6)	Family Group 3 (7- 9)	Family Group 4 (10- 12)	Family Group 5 (13- 15)	Family Group 6 (16- 19)	Family Group 7 (20 & above)	Average Size
1	2	3	4	5	6	7	8	9	10	11
1	Below 1.0	656136	55554	375339	162210	48726	14307	0	0	6.13
2	1.0 - 1.99	162575	10022	79073	51380	16259	5841	0	0	6.69
3	2.0 - 3.99	77556	4880	33106	25025	10455	4090	0	0	7.06
4	4.0 - 9.99	21206	1492	8445	5980	3078	2211	0	0	7.44
5	10 and Above	1158	81	352	362	272	91	0	0	7.84
All Groups		918631	72029	496315	244957	78790	26540	0	0	6.34

Check point: 1. Column 3 = Column 3 of Table 1.
 2. Individually Columns 4,5, 6, 7, 8, 9 and 10 should be less than or equal to Column 3.
 3. Columns 4+5+6+7+8+9+10 =Column 3.
